"As a business owner, you don't have time to waste on technical and operational issues. That's where we shine! Call us and put an end to your IT problems finally and forever!"
- Abdullah Sanders, SanTrac Technologies Inc

The 3 Options For IT Support And How To Choose The One That Fits Your Business

If you're a business owner or planning to open a new business, chances are you have looked into IT support options. For those unfamiliar with the world of IT support, it can be confusing trying to figure out which option is best for your business. You might be interested in the most cost-efficient option but worry that it won't offer enough support. Maybe you have looked at more extensive options and wondered what is truly necessary for your company's needs.

It can be problematic to look at cost alone to decide which option is best for you. When determining IT needs, there are three predominant options – that all come with

different benefits and drawbacks – to consider before factoring in the cost of the company.

Time And Materials

Those in the industry who use the time-and-materials option are often referred to as "break-fix services." This essentially means that you pay an agreed-upon hourly rate for a technician to "fix" a problem when something "breaks." Many people like this option because it is the most straightforward and simple way to pay for IT assistance, but it often doesn't work in your favor and can even lead you to pay more for basic services.

The only time that I would recommend the time-and-materials

approach is if you already have a competent IT person or team proactively managing your IT and you need additional support for a problem that your current IT team doesn't have the expertise to handle. Under the break-fix model, you'll find a fundamental conflict of interest between you and your IT firm. The IT company has no immediate need to stabilize your network because they are getting paid hourly. Computer networks absolutely need ongoing maintenance and monitoring to stay secure – something the break-fix model cannot supply.

Managed IT Services

In this option, the IT services company takes over the role of

your in-house IT department for a fixed and agreed-upon monthly rate. They'll install, support and maintain all the users, devices and PCs that are connected to your network on a routine basis. They will even take care of your hardware and software needs for an extra cost. This model works for many businesses because it allows them to plan for IT services in their monthly budget and provides the business with routine maintenance and IT support that they will need. With managed IT services that are offered by managed services providers, you need to pay attention to the services they deliver for their monthly fees. Sometimes your needs may cost extra or the services you truly need are simply not offered.

“Computer networks absolutely need ongoing maintenance and monitoring to stay secure.”

It's my sincere belief that the managed IT approach is undoubtedly the most cost-effective and intelligent option for any business. Managed IT services are all about protecting your business from IT-related problems while keeping your systems up and running. In our current age, cybercriminals are working around the clock, trying to gather valuable data. Hiring a managed services provider will help protect your business and prevent common “disasters” such as rogue employees, lost devices, hardware failures, fires, natural disasters and a host of other issues that can interrupt or outright destroy your IT infrastructure and the data it holds.

Technology As A Service

The final option that you will run into on your hunt for IT support is companies offering technology as a service. These companies offer everything that managed IT services offer but with the addition of new hardware, software and support. This service ensures that your business is always up to date with the newest

technologies. You'll need to read the fine print, though since many of these companies do not cover third-party software. The greatest benefit of technology as a service is that you'll avoid the heavy cost of new hardware and software when you need it, but you will be paying far more for the same hardware and software over time.

Choosing the correct form of IT support for your company is incredibly important and something you want to attend to. Mistakes could have disastrous effects on your business. If you're unsure of which model will work best for you, give us a call. We'd be glad to help you find the perfect IT support for your business.

Get Different And Avoid Defeat

When I released my first book, *The Toilet Paper Entrepreneur*, I hoped that it would be met with instant success. Instead, nobody bought the book on its initial release day. I felt defeated like most would be in this situation. I quickly questioned my next step. Should I learn how to market effectively or simply give up on my hopes and dreams?

I knew that I wrote a good book and that it would help other entrepreneurs succeed, so it became my mission to properly market it. The lack of good and effective marketing is what holds

many businesses back from reaching their goals.

If you want to beat the competition, you must differentiate yourself from the rest. My book *Get Different* explains ways that you can make your company more visible in the business marketplace. I truly believe that the three main steps from this book can help any company's marketing strategy be more engaging and effective.

The first thing you need to do is differentiate your business from its competitors. Strong word-of-mouth marketing is incredibly difficult to

achieve and can lead to failure. Instead, you should get out there and use your marketing tools to ensure that people know just how great your business is. Use your talents to stand out from the crowd. Consumers will surely take notice of your brand if you appear to be more knowledgeable or even funnier than the competition.

After you get your consumers' attention, you need to offer engagement opportunities. Give your campaign an authoritative, trustful or socially significant approach so they feel comfortable using your business.

Client Spotlight: CDL Accounting, LLC

CDL Accounting is an income tax and accounting practice started by Donna Mitchell over 18 years ago. Their mission is for the customer to receive fast and effective solutions that restore their peace of mind. If you are looking for a company to help you develop a tax strategy that will ensure maximum cash flow, look no more!
